

“METHOD AND SYSTEM FOR CHARACTER SEQUENCE
CHECKING ACCORDING TO A SELECTED LANGUAGE”

ABSTRACT OF THE DISCLOSURE

5 A method and system for checking the validity of a sequence of
input characters according to the syntactical rules of a selected language is
provided. If an input character may not begin a valid sequence of
characters, or if the input character may not be appended to a previously
input sequence of characters according to the rules of the selected language,
10 the newly input character may be prohibited from being displayed
singularly or appended to the previous sequence and displayed on the user's
computer. Previously input character sequences may be edited by
determining the sequence validity context of previously input sequences of
characters.
